Lab Task 02: Image Slider

Instruction:

- 1. Complete the task**
- 2. After completion, push the code in the GitHub repository.**

Scenario:

A travel agency wants a Homepage Image Banner that showcases beautiful travel destinations. The slider should move automatically, but users must also control it manually using navigation buttons

Steps:

- Create an array of image URLs.
- Display one main image inside an `<img>` tag.
- Add two buttons: **Previous and Next.**
- On clicking:
 - Use array indexes to navigate through images.
 - Change the src of the main image.
- Add an **automatic slideshow** using **`setInterval()`** that changes the image every **3** seconds.
- Ensure the slider **loops** when reaching the first or last image.
